**B. E. (Eighth Semester) Examination,
April-May 2020**

(Old Scheme)

(Civil Engg. Branch)

ANALYSIS of FRAMED STRUCTURE

Time Allowed : Three hours

Maximum Marks : 80

Minimum Pass Marks : 28

Note : Part (a) in all question is compulsory. Solve
any one from (b) or (c) in each question.
Assume any other suitable data required.

Unit-I

1. (a) Explain rotation factor in Kani's method. 2
- (b) Analyse the continuous beam loaded in fig. 1, by
 Kani's method. Sketch BM diagram : 14

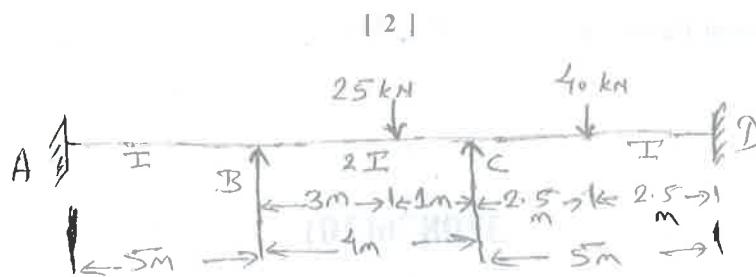

Fig. 1

- (c) Analyse the continuous beam loaded as shown in fig. 2 by the slope deflection method. Sketch the B.M. and S.F. diagrams.

14

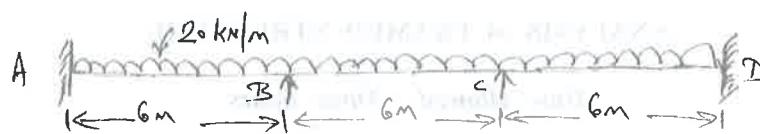

Fig. 2

Unit-II

2. (a) Explain Portal frame. 2
 (b) Analyse the frame shown in fig. 3 for horizontal force by approximate method (Portal method). 14

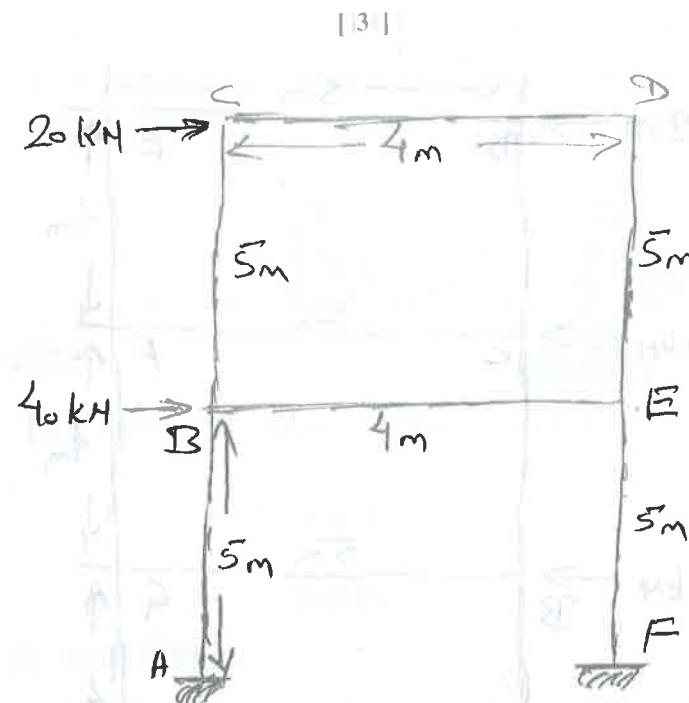

Fig. 3

- (c) Analysis the frame shown in fig. 4 by approximate method.

14

[4]

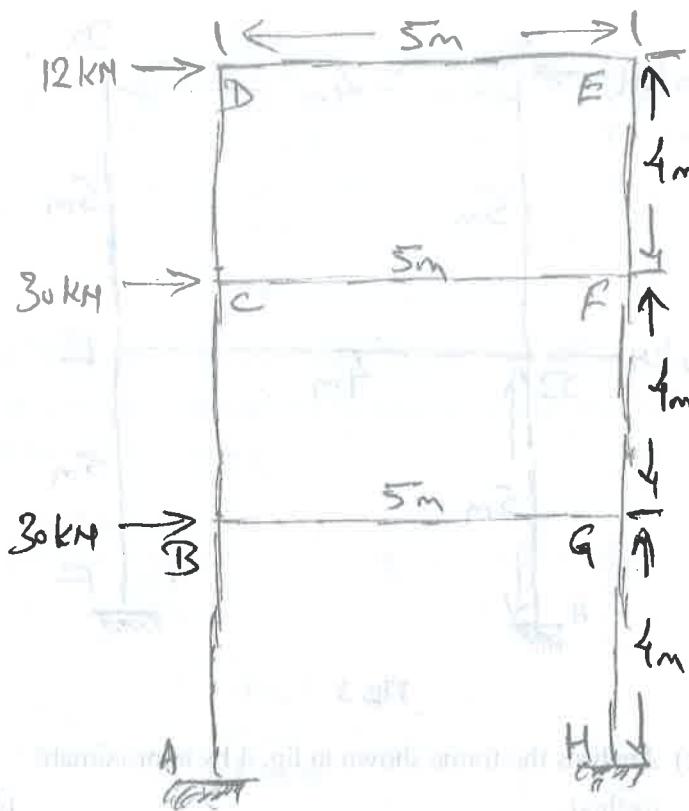

Fig. 4

Unit-III

3. (a) Define flexibility. 2
 (b) Analyse the structure having degree of freedom more than one. 14

[5]

- (c) Develop the flexibility matrix for the simply supported beam in fig. 5. 14

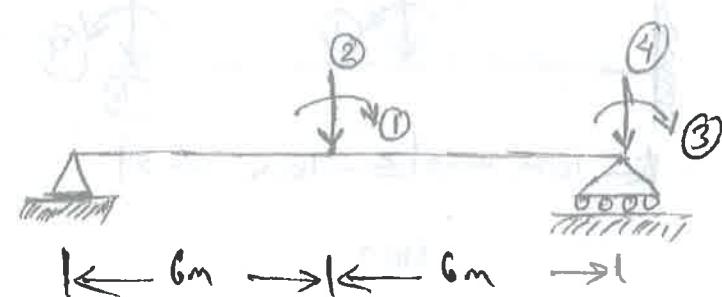

Fig. 5

Unit-IV

4. (a) Define Stiffness. 2
 (b) Develop the stiffness matrix for the sets of springs shown in fig. 6. 14

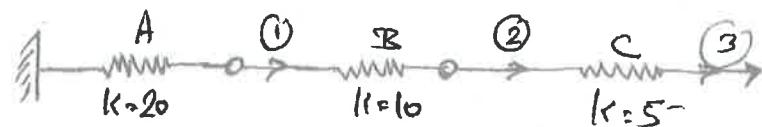

Fig. 6

- (c) Develop stiffness matrixes for the beam AB with reference to the co-ordinates shown in fig. 7. 14

[6]

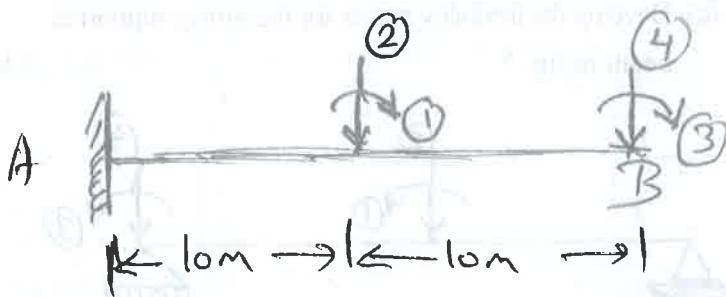

Fig. 7

Unit-V

5. (a) What is the need to study FEM? 2
(b) Write the steps involved in finite element analysis. 14
(c) Discuss the Rayleigh Ritz finite elements method and Galerkin's method for FEM. 14

using 6/7 modality will obtain zero stiffness matrix (0)

Because, if we apply unit force at any node, then the reaction force will be zero.
